Project Proposal / Team 5:

Project Title

Project description:

The application that we are proposing is one which you type into a search field the cocktail you are looking for the recipe on. The application will utilize the cocktaildb API and will return the items and ingredients. In addition to the recipe and ingredients we plan on including the location, name and address of liquor stores via google maps API, via users zip code.

User Story:

As a User I can search for a cocktail and find ingredients & instructions. The location of the liquor store will be provided if the user decides to enter in the zip code.

Framework:

API servers planning to utilize:

- Cocktaildb
- Google Maps

Breakdown of tasks:

1. Create HTML
2. Testing
3. Utilize Bulma for Framework
4. Testing
5. Deploy page to GitHub
7. Integrate cocktail database API to put on page.
6. Testing
7. Integrate google maps database API for the locations.
8. Testing
9. Build presentation.
10. Testing
